PROFESSIONAL SUMMARY

Versatile Senior Full Stack Engineer with over 7+ years of professional experience specializing in the MERN stack, TypeScript, and AWS cloud architecture. Proven track record of designing, building, and deploying high-throughput SaaS platforms, real-time collaboration engines, and enterprise software utilities. Exceptional ability to translate complex product logic into scalable, clean backend architectures and fast, user-centric frontend experiences, ensuring seamless performance, absolute data integrity, and cross-platform versatility.

CORE TECHNICAL CAPABILITIES

Languages & Runtimes:	JavaScript (ES6+), TypeScript, Node.js, Python, HTML5, CSS3, C#, SQL
Backend Architecture:	Express.js, NestJS, .NET Core, RESTful APIs, GraphQL, Microservices, Event-Driven Architectures
Frontend & Mobile:	React.js, Next.js (SSR/SSG), Angular, Redux Toolkit, Context API, Tailwind CSS, React Native, Flutter
Data Architecture:	MongoDB (Aggregation, Index Optimization), MySQL, PostgreSQL, SQL Server, Redis (Caching Layer)
Cloud & DevOps:	AWS (EC2, S3, IAM, CloudWatch), Docker, CI/CD (GitHub Actions), Nginx, WebSockets, Socket.io, WebRTC
Tooling & Testing:	Git, Jira, Postman, Sentry, Jest (Unit Testing), Webpack, Vite

PROFESSIONAL EXPERIENCE

Full Stack Tech Lead - Sky Infoway Mar 2025 - Present | Surat, India

Inout Resident Management System (Enterprise B2B SaaS Ecosystem)

- Built a comprehensive ERP system to handle residential workflows including complex maintenance tracking, parking allocations, and automated online payment reconciliations.
- Refactored backend services using Node.js, Express, and NestJS to eliminate database deadlocks and optimize operational flow during peak monthly billing cycle runs.
- Developed interactive admin dashboards using Next.js Server-Side Rendering (SSR) to achieve near-instantaneous page loads and smooth client data rendering.
- Created a real-time visitor alert and push-notification module with WebSockets, slashing end-to-end event transit latency for active user security desks.

KlearCom - Global CX Testing & IVR Intelligence Platform

- Contributed to a worldwide customer experience testing framework designed to monitor automated IVR journeys, call paths, and telecom backbone connectivity across 330+ distinct carriers across 100+ nations.
- Built custom automated listeners that detect audio degradation, dead lines, and dropped transfers, giving enterprises immediate, actionable insight before impact ripples to end consumers.

Cowberry E-Commerce Marketplace & Fleet Logistics Matrix

- Managed the end-to-end full stack execution of a multi-vendor marketplace capable of handling high-volume API data streams and real-time stock availability updates.
- Integrated Stripe and Razorpay transactional routing logic with strict verification checkpoints to ensure accurate multi-party payout splits and secure payment isolation.
- Deployed memory caching strategies utilizing Redis, accelerating frequent product catalog queries and cutting API turnaround times by 40%.

Lead Full Stack Engineer (Senior Software Engineer) - Softices

Mar 2024 - Mar 2025 | Surat, India

Enterprise Workforce Management Platform & Cloud Integration

- Engineered over 50 modular micro-features spanning automated employee attendance matrixes, dynamic payroll generation, and strict multi-tenant compliance tracking for over 5,000 active enterprise users.
- Designed robust end-to-end TypeScript models and strict database validators across GraphQL and RESTful nodes, completely wiping out common runtime null-pointer exceptions.
- Set up automated monitoring pipelines via GitHub Actions and Docker to push updates cleanly onto AWS EC2 instances running behind Nginx reverse proxies, reducing manual deployment efforts.
- Optimized legacy SQL Server stored procedures, dropping data compilation times by 30% for high-density year-end workforce summaries.

VTS (Visual Tracking for Smart Manufacturing) - Norway

- Engineered an operational tracing backend tool for a Norwegian manufacturing intelligence suite, creating transparency from initial consumer purchase intents straight to production floors.
- Created deep integration matrices into Microsoft Dynamics 365 Business Central to surface operational metrics on work centers, non-conformance reports (NCRs), and on-time shipment metrics.

VRS - Automated Workforce Management SaaS

- Designed a cloud-based workforce productivity platform aggregating employee shift logging, project allocation registries, smart hourly wage calculations, and vacation balance tables under a unified ecosystem.
- Linked system outputs to downstream accounting and payroll engines, giving factory leads real-time insight into true operational hour balances and precise project labor expenses.

Parivar - Family & Community Networking App

- Created a cross-platform private networking app using React Native, Node.js, and MongoDB to allow community groups to build secure digital directories and maintain historic milestones safely.
- Implemented custom privacy controls and granular data access rights, giving individuals total authority over who views shared content, albums, and private lineage trees.

Senior Full Stack Developer - ProExelancers

Sep 2021 - Mar 2024 | Surat, India

Digital Points Rewards & WriteCraft Real-Time Collaboration Suites

- Architected highly reliable message pipelines using Node.js and MongoDB to effortlessly absorb concurrent user operations during peak promotion events for 10,000+ daily active accounts.
- Fine-tuned heavy read query indexes inside MySQL production servers, trimming database server compute load by 35% without requiring hardware upgrades.
- Implemented an asynchronous document upload pipeline routing file assets through secure, time-limited AWS S3 buckets to handle automated user compliance verifications.
- Built a live state-sync collaborative text engine with Socket.io that handles simultaneous cursor adjustments and instant character changes cleanly.

MatchUp India - Smart Dating & Matchmaking Platform

- Designed the full stack framework for a high-security dating platform centered around interest-matching models and user identity validation workflows.
- Built an instantaneous chat room framework using Node.js and WebSockets with tight security controls to guarantee absolute conversation confidentiality and prevent data leaks.

SynMax - Maritime Intelligence & Geospatial Analytics

- Developed advanced frontend visualization dashboards for the Theia platform, processing massive daily satellite imagery arrays to map precise global vessel tracks.
- Integrated complex layers merging optical, synthetic-aperture radar (SAR), and automatic identification system (AIS) telemetry to display live tracking indicators, flagging instances of dark ships or sanctions breaches.

- **The Sports Zone Marketplace:** Crafted dynamic venue scheduling rules, automated slot bookings, and dual-gateway transaction processing flows using React.js and Node.js.
- **EduPlay Live Platform:** Implemented interactive peer-to-peer real-time learning streams and virtual classroom feeds using customized WebRTC data channels.
- **EventHub Connect & LoveIn:** Formulated highly responsive layout views for interactive map search alongside optimized MongoDB geospatial schemas to quickly pull nearby event feeds.

AWARDS & ACHIEVEMENTS

Quality Champion of the Month - Sky Infoway (FY2025)
Top Performer of the Month - Softices (FY2025)
Bug Specialist of the Year - ProExelancers (FY2024)
Perfectionist of the Year - ProExelancers (FY2023)
